

**St. Thomas College, Bhilai**

**Chemistry Monthly teaching schedule, 2019 -20**

**Class - M.Sc 1<sup>ST</sup> Sem Paper-I**

**Name of Faculty Member- Ms. Neha Verma**

Month	Topic
August	<p><b><u>Unit – I Symmetry and Group Theory In chemistry:</u></b> Symmetry elements and symmetry operation, definitions of group, subgroup, relation between orders of a finite group and its subgroup. Conjugacy relation and classes. Point symmetry group. Schonflies symbols, representations of groups by matrices (representation for the C<sub>n</sub>, C<sub>nv</sub>, C<sub>nh</sub>, D<sub>nh</sub> etc. groups to be worked out explicitly). Character of a representation. The great orthogonality theorem (without proof) and its importance. Character tables and their use; spectroscopy.</p>
September	<p><b><u>Unit – II Metal Ligand Bonding :</u></b> Limitation of crystal field theory, molecular orbital theory, octahedral, tetrahedral and square planar complexes, bonding and molecular orbital theory. <b>Metal Complexes:</b> Metal carbonyls, structure and bonding, vibrational spectra of metal carbonyls for bonding and structural elucidation, important reactions of metal carbonyls; preparation, bonding, structure and important reactions of transition metal nitrosyl, dinitrogen and dioxygen complexes;</p>
October	<p><b><u>Unit –III Metal–Ligand Equilibria In Solution:</u></b> Stepwise and overall formation constants and their interaction, trends in stepwise constants, factors affecting the stability of metal complexes with reference to the nature of metal ion and ligand, chelate effect and its thermodynamic origin, determination of binary formation constants by pH-metry and spectrophotometry <b>Isopoly Acid And HeteropolyAcid:</b> Isopoly and heteropoly acids of Mo and W. Preparation, properties and structure.</p>
November	<p>Classification, Preparation, properties and structures of borides, carbides, nitrides and silicides. Silicates- classification and Structure, Silicones- preparation, properties and application <b><u>Unit – IV Metal Clusters:</u></b> Higher boranes, carboranes, metalloboranes and metallocarboranes. Metal carbonyl and halide cluster, compounds with metal-metal multiple bonds. <b>Chains:</b> catenation, heterocatenation, intercatenation. <b>Rings:</b> Borazines, phosphazines</p>

**Paper-2 Name of Faculty Member- Dr.Chanda Verma/ Ms. Monika Bombarde**

Month	Topic
July	<p><b><u>Unit-I Nature of Bonding in Organic Molecules :</u></b> Localized and Delocalized Chemical bond, conjugation and cross Conjugation, Bonding in Fullerenes, Bonds weaker than co-valent Aromaticity in Non-benzenoid compounds, Huckels Rule Annulenes and Aromaticity, Homoaromaticity and Annulenes. PMO approach for Aromaticity.</p>
August	<p><b><u>Unit-II Conformational Analysis:</u></b> Conformational analysis of Cycloalkanes Conformational Analysis of Decalins, effect of conformation on reactivity, Conformation of Sugars Steric strain due to unavoidable crowding, Stereochemistry: Elements of symmetry, Chirality Molecules with more than one chiral center, methods of Resolution, Optical purity stereospecific and stereoselective synthesis, Asymmetric synthesis. Optical activity in the absence of Chiral carbon Optical activity in Biphenyls, Allenes and spiranes Chirality due to Helical shape.</p>
	<p><b><u>Unit-III Reaction Intermediates:</u></b></p>

September	Generation Structure, Stability and Reactivity of Carbocations, Carboanions Stability and Reactivity of Carbon Free Radicals, Carbenes and Nitrenes: Stability and Reactivity. Sandmeyer Reaction Free radical rearrangement and Hunsdieker reaction. Elimination Reactions: E2 mechanism, E1 and E1cB mechanisms, Orientation of the double bond. Reactivity, effects of substrate structure, attacking base, Effects of the leaving Group and the medium.
October	<b>Unit-IV Pericyclic Reactions :</b> Classification of pericyclic reactions, Woodward –Hoffmann correlation diagrams FMO and PMO approach Electrocyclic reactions – conrotatory and Disrotatory motions and Allyl systems Correlation diagram in $4n$ , $(4n+2) \pi$ system, Cycloadditions - Antarafacial and Suprafacial shift of H,
NOVEMBER	3,3- and 5,5-Sigmatropic rearrangement, Claisen, Cope and Aza Cope rearrangements, Ene Reaction

**Paper-3 Name of Faculty Member- Dr. . Ashish kumar Bhui**

Month	Topic
July	<b>Unit-I: Mathematical Concept in Quantum Chemistry :</b> Vector quantities and their properties Complex numbers and Coordinate transformation, Differential and Integral Calculus Basis rules of Differential and Integration Application. The Schrodinger equation and postulates of quantum mechanics, Discussion of solutions of the Schrodinger equation to some model system viz Particle in a box the harmonic oscillator, the rigid rotator, the hydrogen atom.
August	<b>Unit-II Basics of Thermodynamics :</b> Maxwell's thermodynamic relations and its applications, Reaction isotherm, Van't Hoff hypothesis. Partial molar properties; Partial molar free energy, partial molar volume and partial molar heat content. Chemical potential, Gibbs Duhem equation, variation of chemical potential with temperature and pressure. Chemical potential of ideal gases, pure solids, liquids and mixture of ideal gases Activity and Fugacity, Determination of Fugacity, Variation of Fugacity with Temperature and Pressure .
September	<b>Unit-III Electrochemistry - I:</b> Electrochemistry of solution, Debye-Huckel Onsager treatment and its extension ion solvent interactions, Debye-Huckel-Limiting Law, Debye-Huckel theory for activity coefficient of electrolytic solutions Thermodynamics of electrified interface equations. Lippmann equation (surface excess) methods of determination.
October	<b>Unit – IV Chemical Dynamics– I:</b> Methods of determining rate Laws, Consecutive Reactions, collision theory of reaction rates, steric factor Activated complex theory kinetic salt effects, steady state kinetics and thermodynamic and Kinetic control of reactions
November	Dynamic chain (Hydrogen-bromine and Hydrogen chlorine reactions) Oscillatory reactions (Belousov-Zhabotinsky reaction)

**Paper-4 Name of Faculty Member- Dr. James Mathew.**

Month	Topic
July	<b>Unit I: Unifying Principles :</b> Electromagnetic radiation : interaction of electromagnetic radiation with matter-absorption, emission transmission, reflection, dispersion, polarization and scattering Uncertainty relation and natural line width and natural line broadening, transition probability,

August	selection rules, intensity of spectral lines Born-Oppenheimer approximation vibrational and electronic energy levels. Region of spectrum, representation of spectra, F.T. spectroscopy, computer averaging, lasers.
September	<b>Unit- III Infrared Spectroscopy:</b> Introduction, simple and anharmonic oscillators in vibrational spectroscopy diatomic-vibrating rotator, Modes of vibration in polyatomic molecules, vibration coupling, Fourier Transform IR spectroscopy: instrumentation, interferometric spectrophotometer, sample handling Factors influencing vibrational frequencies, Application of IR spectroscopy: Interpretation of IR spectra of normal alkanes, aromatic hydrocarbons
October	<b>Unit- IV Raman Spectroscopy</b> Classical and quantum theories of Raman effect : pure rotational, vibrational and vibrational-rotational Raman spectra, selection rules mutual exclusion principle.
November	Resonance Raman spectroscopy, Coherent anti Stokes Raman spectroscopy (CARS), Instrumentation, Application of Raman effect in molecular structures, Raman activity of molecular vibration, structure of CO <sub>2</sub> , N <sub>2</sub> O, SO <sub>2</sub> , NO <sub>3</sub> <sup>-</sup> , CIF <sub>3</sub>

**M.Sc –II Sem**

**Paper-I Name of Faculty Member- Ms. Neha Verma**

Month	Topic
January	<b>Unit-1</b> Energy profile of a reaction, reactivity of metal complexes, inert and labile complexes, kinetic application of valence bond and crystal field theories, kinetics of octahedral substitution, anation reactions, reactions metal ligand bond cleavage Substitution reactions in square planar complexes, the transeffect. Redox reactions, electron transfer reactions, mechanism of one electron transfer reactions, outer sphere type reactions, cross reactions and Marcus-Hush theory, inner sphere type reactions
February	Unit-II Spectroscopic ground states, Correlation, Orgel and Tanabe-Sugano diagrams for transition metal complexes (d1-d9 states), Selection rules, mechanism for break down of the selection rules, intensity of absorption, band width spectra of d-d metal complexes of the type [M (H <sub>2</sub> O)] <sup>n+</sup> , spin free and spin paired ML <sub>6</sub> complexes of other geometries, Calculations of Dq, B and parameters, spin forbidden transitions effect of spin-orbit coupling, Spectrochemical and Nephelometric series. Magnetic properties of complexes of various geometries based on crystal field model, spin free-spin paired equilibrium in octahedral stereochemistry
March	Unit-III Transition metal complexes with unsaturated organic molecules, alkenes allyl, diene dienyl, arene trienyl complex, preparations, properties, nature of bonding, structure features. Important reaction relating to nucleophilic and electrophilic attack on ligands and organic synthesis. Transition Metals Compound with Bond to Hydrogen
April	Unit-IV Types, routes of synthesis, stability and decomposition pathways, organocopper in organic synthesis Alkylidenes, low valent carbenes nature of bond and Structural characteristics. Fluxionality and dynamic equilibria in compounds.

**Paper-2 Name of Faculty- Dr. Chanda Verma**

Month	Topic
January	<b>Unit I :</b> Aliphatic nucleophilic substitution – Introduction, SN <sup>1</sup> reaction mechanism, SN <sup>2</sup> Reaction mechanism Factors affecting SN <sup>1</sup> and SN <sup>2</sup> , Neighbouring group participation Neighbouring group participation continues, anchimeric Assistance Phase transfer Catalysis, SN <sub>Ar</sub> and benzyne mechanism, Effect of Substrate Structure, leaving group and Attacking nucleophile Von Richter, Sommet hauser Reaction Mechanism, Smiles Rearrangement

February	<b>Unit II:</b> Mechanism of SE <sub>2</sub> , SE <sub>1</sub> – Electrophilic Substitution Reaction, Electrophilic substitution accompanied by double bond Effect of substrate Leaving group and solvent polarity, arenium ion mechanism orientation and Reactivity, Ortho/para ratio, Ipso attack Orientation in other ring system, effect of substrate and Electrophiles, Vilsmeier reaction and Gattermann reaction
March	<b>Unit III:</b> Mechanistic and Stereochemical aspects of addition reaction involving electrophiles, nucleophiles and free radicals, regio- and chemoselectivity, Addition to cyclopropane ring Hydrogenation of Aromatic rings, hydroboration, Michael reaction, Sharpless asymmetric epoxidation
April	<b>Unit IV:</b> Mechanism of Metal Hydride, reduction of saturated and unsaturated carbonyl compounds Reduction of acid esters and nitriles. Addition of Grignard reagents, organo Zinc and Organolithium to carbonyls and unsaturated carbonyl compounds Wittig Reaction Mechanism of condensation reactions involving enolates - Aldol Knoevenagel and Stobbe reactions, hydrolysis of esters and amides ammonolysis of esters

**Paper-3 Name of Faculty – Dr. Ashish Kumar Bhui**

Month	Topic
July	<b>Unit – I Application of matrices in quantum chemistry:</b> Addition and multiplication, inverse and transpose of matrices. Determinants, in quantum Chemistry. <b>angular momentum in quantum chemistry:</b> Angular momentum, angular momentum Operators. Eigen functions and Eigen values Angular momentum, ladder operators. <b>approximate methods:</b> The variation theorem, linear variation principle, Perturbation theory (first order and non-degenerate). Applications of variation method and perturbation theory to the Helium atom.
August	<b>Unit – II Statistical thermodynamics:</b> Probability, permutations and combinations concepts of probability, Maxwell Boltzmann distribution. Different ensembles and Partition functions translational, rotational, vibrational and Electronic. Thermodynamic function using appropriate Partition function, Fermi-Dirac and Bose-Einstein Statistics and statistical basis of entropy, Heat capacity of solids Debye and Einstein Models.
September	<b>Unit – III Electrochemistry – II:</b> Structure of electrified interfaces. Gouy-Chapman, Stern, Over potentials and exchange current density, Derivation of Butler – Volmer equation, Tafel plot. Semiconductor interfaces, Theory of double layer at semiconductor, electrolyte solution interfaces, structure of double layer interfaces. Effect of light at semiconductor solution interfaces. Electro catalysis influence of various parameters. Hydrogen electrode
October	<b>Unit – IV Chemical dynamics – II:</b> General features of fast reactions by flow method, relaxation method, flash photolysis and the nuclear magnetic resonance method. Dynamics of molecular motions, probing the transition state, dynamics of barrier less chemical reactions in solutions, dynamics of unimolecular reaction.
November	Lindemann – Hinshelwood and Rice-Ramsperger-Kassel-Marcus {RRKM} theories of unimolecular reactions

**Paper-4 Name of Faculty – Dr. James Mathew**

Month	Topic
January	<b>Unit – I Ultraviolet and visible spectroscopy:</b> Introduction, Intensity of vibrational – electronic spectra, Frank-Condon principle, dissociation energy, Rotational fine structure of electronic – vibrational transitions, shape of molecular orbitals of some molecules viz., H <sub>2</sub> , He <sub>2</sub> , N <sub>2</sub> , O <sub>2</sub> . Electronic spectra of organic molecules, chromophores, Applications of electronic spectroscopy and identification of organic molecules. Spectrophotometric studies of complex ions, determination of ligand/metal ratio in a complex, determination of stability constants.

February	<b>Unit – II Infra red spectroscopy:</b> introduction, simple and anharmonic oscillators in vibrational spectroscopy, diatomic-vibrating rotor, modes of vibration in polyatomic molecules, vibration-coupling, fourier transform ir spectroscopy: instrumentation, interferometric spectrophotometer, sample handling, factors influencing vibrational frequencies, application of ir spectroscopy: interpretation of ir spectra of normal alkanes, aromatic hydrocarbons, alcohols and phenols aldehydes and ketones, ethers, esters, carboxylic acids, amines and amides.
March	<b>Unit – III Mass spectrometry:</b> Introduction, basic principles, separation of the ions in the analyzer, resolution, molecular ion peak, mass spectral fragmentation of organic compounds, factors affecting fragmentation, McLafferty rearrangement. Instrumentation, Characteristics of mass spectra of Alkanes, Alkenes, Aromatic hydrocarbons, Alcohols, Amines. Nitrogen rule, ring rule, Molecular weight and formula determination. Gas chromatography-Mass spectrophotometry:
April	<b>Unit - IV Nuclear resonance spectrophotometry:</b> Theory of NMR spectroscopy, interaction of nuclear spin and magnetic moment, chemical shift, processional motion of nuclear particles in magnetic field, spin-spin splitting, coupling constants, factor affecting the chemical shift, shielding effect, effect of chemical exchange, hydrogen bonding instrumentation of Fourier transform NMR spectrophotometer, structure determination of organic compounds, Carbon-13 NMR spectroscopy, Multiplicity-proton (1H) decoupling-noise decoupling, off resonance decoupling, selective proton decoupling. Chemical shift (aliphatic , olephinic, alkyne, aromatic and carbonyl carbon)

**M.Sc- III Sem**

**Paper-1** Name of Faculty Member- Ms. Neha Verma

Month	Topic
July	<b>Unit-I Electron spin resonance spectroscopy:</b> Introduction, principle, Hyperfine coupling, spin polarization for atoms and transition metal ions, spin-orbit coupling and significance of g-tensors, application to transition metal complexes. <b>Nuclear quadrupole resonancespectroscopy:</b> Quadrupole nuclei, quadrupole moments, electric field gradient, coupling constant, splittings, applications.
August	<b>Unit –II Photoelectron Spectroscopy:</b> Basic principle for atoms and molecules;Photo-electric effect, ionization process, Koopman’s theorem, Auger electron spectroscopy,Determination of Dipolemoment. Photoelectron spectra of simple molecules-ESCA. <b>Photoacoustic spectroscopy:</b> Basic principle of Photo acoustic Spectroscopy (PAS), PAS –gases and condensed system. Chemical and Surface applications
September	<b>Unit –III Photochemical reactions:</b> Interaction of electromagnetic radiation with matter, Stern Volmer equation, types of excitations, fate of excited molecule, quantum yield, transfer of excitation energy, Actinometry.determination of reaction mechanism: Classification, rate constants and life times of reactive energy states , determination of rate constants of reactions. Effect of light intensity on the rate of photo chemical reactions.miscellaneous photochemical reactions: Photo-Fries reactions of anilides, Photo-Fries rearrangement. Barton reaction. Singlet molecular oxygen reactions. Photochemical formation of smog. Photo degradation of polymers, Photochemistry of vision.

October	<p><b>Unit –IV Organocatalysis</b>            General Principles: Energetics, Catalytic cycles, catalytic efficiency and life time, selectivity. Type of organometallic reactions: Ligand substitution, Oxidative addition, reductive elimination and insertion and de-insertion. Homogeneous catalysis: Hydrogenation of alkenes, Hydroformylation, Monosubstituted acetic acid synthesis, Wacker oxidation of alkenes. Alkenes metathesis, Palladium- Catalysed C-C bond forming reactions, asymmetric oxidation. Heterogenous catalysis: The nature of heterogenous catalysts, Fischer- Tropsch synthesis, alkene polymerization.</p>
---------	--

**Paper no.-2 Name of Faculty Member- Dr. Chanda Verma**

Month	Topic
July	<p><b>Unit-I Bioenergetics:</b> Standard free energy change in biochemical reactions, exergonic, endergonic. Hydrolysis of ATP, synthesis of ATP from ADP. electron transfer in biology: Structure and function of metalloproteins in electron transport processes–cytochromes and Ion-sulphur proteins, synthetic models. transport and storage of dioxygen: Heme proteins and oxygen uptake, structure and function of haemoglobin, myoglobin, haemocyanins and haemerythrin, model synthetic complexes of iron, cobalt and copper.</p>
August	<p><b>Unit –II Metalloenzymes:</b> Zinc enzymes – carboxypeptidase and carbonic anhydrase. Iron enzymes – catalase, peroxidase and cytochrome P-450. Copper enzymes-superoxide dismutase. Molybdenum oxotransferase enzymes –xanthineoxidase. ENZYME MODELS: Host-guest chemistry, chiral recognition and catalysis, molecular recognition, molecular asymmetry and prochirality. Biomimetic chemistry, Cyclodextrin-based enzyme models, calixarenes, ionophores, synthetic enzymes orsynzymes</p>
September	<p><b>Unit –III Enzymes:</b> Nomenclature and classification of Enzyme. Induced fit hypothesis, concept and identification of active site by the use of inhibitors.co-enzyme chemistry: Structure and biological functions of coenzyme A, thiamine pyrophosphate, pyridoxal phosphate, NAD+NADP+, FMN, FAD, lipoic acid, vitamin B12. biotechnological applications of enzymes: Techniques and methods of immobilization of enzymes, effect of immobilization on enzyme activity, application of immobilization enzymes in medicine and industry. Enzymes and Recombinant DNA Technology</p>
October	<p><b>Unit –IV Biopolymer interactions:</b> Forces involved in biopolymer interaction. Electrostatic charges and molecular expansion, hydrophobic forces, dispersion force interactions. Multiple equilibria and various types of binding processes in biological systems. Hydrogen ion titration curves.thermodynamics of biopolymer solutions: Thermodynamics of biopolymer solution, osmotic pressure, membrane equilibrium, muscular contraction and energy generation in mechanochemical system.cell membrane and transport of ions: Structure and functions of cell.membrane, ion transport through cell membrane, irreversible thermodynamic treatment of membrane transport and Nerve conduction.</p>

**Paper no.-3 Name of Faculty Member- Dr. Ashish kumar Bhui**

Month	Topic
July	<p><b>Unit-I Acids, bases, electrophiles, nucleophiles and catalysis :</b> Acid-base dissociation, Electronic and structural effects, acidity and basicity. Acidity function and their</p>

	applications. Hard and soft acids and bases. Nucleophilicity scales. Nucleofugacity. The alpha effect. Ambivalent Nucleophilies. Acid base catalysis-specific and general catalysis. Bronsted catalysis, Enzyme Catalysis.
August	<b>Unit –II Micelles and adsorption :</b> Micelles : Classification of surface active agents, micellization, hydrophobic interaction, critical micellar concentration (CMC), factors affecting the CMC of Surfactants. Thermodynamics of micellization - phase separation and mass action models. Reverse micells, micro-emulsion. Micellar Catalysis, Surface tension capillary action, pressure difference across curved surface (Laplace equation), vapour pressure of droplets (Kelvin equation), Gibbs adsorption isotherm.
September	<b>Unit –III Solid state chemistry - I :</b> Crystal defects and Non-stoichiometry - Perfect and imperfect crystals, intrinsic and extrinsic defects - point defect, line and plane defects, vacancies - Schottky defects and Frankel defects. Thermodynamics of Schottky and Frenkel defect, formation of color centres, non-stoichiometry and defects. Electronic properties and Band theory of semiconductors.
October	<b>Unit-IV Polymer –</b> Definition, types of polymers, electrically conducting, fire resistant, liquid crystal polymers, kinetics of polymerization, mechanism of polymerization. Molecular mass, average molecular mass, molecular mass determination (Osmometry, Viscometry, diffusion and light scattering methods), Sedimentation, chain configuration of macromolecules, calculation of average dimensions of various chain structures

**Paper no.-4 Name of Faculty Member- Dr. James Mathew**

MONTH	TOPIC
July	<b>Unit-I Sampling -</b> Collection, Preservation and preparation of sample, Techniques of sampling solids, liquids and gases, Operation of drying and preparing a solution of the analyte. Principle, methodology and application of different types of digestions such as acid digestion, base digestion, enzymatic and microwave digestion for liquid and solid materials. Evolution and procession of Analytical Data, Precision and Accuracy, Types of Errors, Propagation of errors, Normal Distribution Curve, Standard deviation, Confidence limit, Graphical presentation of result-Method of average, Method of Linear least square, Significant figures, Statistical aid to hypothesis testing-t-test, F-test, Correlation coefficient, Rejection of data.
August	<b>Unit-II Separation techniques-</b> Efficiency of extraction, Selectivity of extraction, Extraction system, Method of Extraction, applications. Principle, classification of chromatographic techniques, Technique and applications of paper chromatography, Thin-layer chromatography, HPLC, Column chromatography. Gas Chromatography
September	<b>Unit –III Thermal and automated methods-</b> Principle, Instrumentation, Application of TGA, DTA and DSC methods. Automated methods, Principle, instrumentation and application of flow injection analysis.
October	<b>Unit –IV Electrochemistry-</b> Principles and instrumentation of pH potentiometry, coulometry and conductometry. POLAROGRAPHY-Basic principles, Diffusion current, polarized electrode, Micro electrode, Dropping Mercury Electrode, Ilkovic equation, Polarographic wave, Qualitative analysis Stripping methods, Cyclic Voltammetry,

	Amperometric titration:- curves, Differential pulse polarography and Squarewave polarography.
--	---

### M.Sc IV Sem

#### Paper no.-1 Name of Faculty Member- Ms. Neha Verma

Month	Topic
January	<b>Unit-I Advanced chromatography</b> :Ion chromatography: Ion exchange equilibrium, Ion-exchange packing and Inorganic Applications.Size exclusion chromatography: Column packing, Theory and applications.Supercritical fluid chromatography: Properties of supercritical fluid, SFC-Instrumentation and operating variables, comparison with other types of chromatography, applications.Capillary Electrophoresis and capillary electrochromatography: overviews and applications
February	<b>Unit –II X-ray and proton induced spectroscopy</b> :X-Ray fluorescent method: Principles, Characteristics x-ray emission. Instrumentation,X-raytube, radioactive sources. Wave length dispersive instruments. Energy dispersive instruments. Analytical Applications-Qualitative Analysis.Proton Induced X-Ray Spectroscopy: Theory, instrumentation and applications
March	<b>Unit –III Atomic emission spectroscopy</b> Selectivity, sensitivity and interferences of atomic spectroscopy Theory, instrumentation and application of flamephotometry, AES, ICP-AES and AFS.
April	<b>Unit –IV Atomic absorption spectroscopy and hyphenated techniques</b> - Theory, instrumentation and applications of flame and graphite furnace AAS, cold-vapour and hydride generation AAS.Theory, instrumentation and application of hyphenated techniques i.e. GC/HPLC/MS-GC/IC/HPLC- ICP-MS.

#### Paper no.-2 Name of Faculty Member- Dr. Chanda Verma

Month	Topic
January	<b>Unit-I Terpenoids and Carotenoids</b> : Classification, nomenclature, occurrence, isolation, general methods of structure determination of Citral, Geraniol, $\alpha$ - Terpeneol, Menthol, Farnesol, Zingiberene, Santonin, Phytol, Abietic acid and $\beta$ – Carotene. Alkaloids: Definition, nomenclature and physiological action, occurrence, isolation, general methods of structure elucidation, degradation, classification based on Nitrogen heterocyclic ring, role of alkaloids in plant. Synthesis and biosynthesis of the following: Ephedrine,(+) - Conine, Nicotine, Atropine, Quinine and Morphine
February	<b>Unit-II Steroids</b> : Isolation, structure determination and synthesis of Cholesterol, Bile acids Androsterone, Testosterone, Esterone, Progesterone, Aldosterone and Biosynthesis of cholesterol.Plant Pigments: Occurrence, nomenclature and general method of structure determination. Isolation and synthesis of Apigenin, Luteolin, Quercetin, Myricetin, Quercetin-3-glucoside, Vitexin, Diadzein, Butein, Aureusin, Cyanidin, Hirsutinidin
March	<b>Unit- III Drug Design</b> Development of new drugs procedures followed in drug design, concepts of lead compound and lead modification, concepts of prodrugs and soft drugs, Structure-Activity Relationship (SAR), Factors affecting bioactivity, resonance, inductive effect. Theories of drug activity: occupancy theory, rate theory, induced fit theory. Quantitative Structure Activity Relationship (QSAR)-Hansch approach-free Wilson model, relationship between free Wilson and Hans analysis Concepts of drug receptors, lipophilicity, pharmacophore, pharmacological activity and typical range of parameters related to drug likeness.General introduction of pharmacokinetics and pharmacodynamics.

April	<b>Unit – IV Antineoplastic Agents:</b> Introduction, Alkylating agents, antimetabolites, carcinolytic antibiotics, mitotic inhibitors. Antibiotics: Constitution and synthesis of penicillins, chloramphenicol, tetracycline and streptomycin. Antimalarials: Synthesis and properties of the following Antimalarial drug: 8-amino quinoline derivatives- Pamaquine, Primaquine, Pentaquine, Isopentaquine. aminoquinoline derivatives- Santoquine, Camaquine, Acridine derivatives- Mepacrine, Azacrin, Pyrimidine and Biguanidine derivatives- Paludrine, Pyremethamine.
-------	---

**Paper no.-3 Name of Faculty Member- Dr. Ashish kumar Bhui**

Month	Topic
January	<b>Unit- I Non equilibrium thermodynamics:</b> Fundamental concepts, Forces and Fluxes, Entropy production, Phenomenological Laws and Onsager's theory for biological systems, coupled reactions.
February	<b>Unit- II Material chemistry:</b> Preparation and Properties of Nanoparticles, Materials- Metals, Ceramics (Oxide, carbides, sulphides, nitrides). Physical and Chemical Methods, Size and Shape controlled Synthesis, Sol-gel methods, Optical Properties, Electrical and Magnetic Properties, Application of Nanoparticles. Characterization of Nanoparticles (SEM, TEM etc.)
March	<b>Unit-III Supramolecular chemistry:</b> Properties of covalent bonds, bond length, inter bond angles, Force constant, bond and molecular dipole moment, molecular and bond polarizability. Intermolecular Forces, hydrophobic effects, Electrostatic, induction, dispersion and resonance energy, Hydrogen bond, Magnetic interactions. Principles of molecular association and organization. Biological macromolecules, Molecular receptors and design principle, cryptands, Cyclophanes, calixarenes and cyclodextrins. Supramolecular reactivity and catalysis.
April	<b>Unit-IV Nuclear and radiochemistry nuclear theory:</b> Nuclear cross section and nuclear radii, nuclear shells and magic numbers, theory of nuclear shell model, nuclear potentials, square well and simple harmonic oscillator potentials, application, liquid drop model, semi-empirical mass equation, application and limitations. nuclear fission: Mass, energy and charge distribution of fission products, decay chains, prompt and delayed neutrons, liquid drop model of nuclear fission. nuclear energy: Nuclear fission, chain reaction, multiplication factor, nuclear reactors applied radiochemistry: Radioactive isotopes, purity and strength of radioisotopes. Radiochemical principle in the use of tracers, Application of Tracers in Chemical investigations, Physico-chemical methods, Analytical applications, Age determinations, Medical applications, Agricultural application

**Paper no.-4 Name of Faculty Member- Dr. James Mathew**

Month	Topic
January	<b>Unit-I Air pollution monitoring and analysis</b> Classification of air pollution monitoring levels, air quality, standards and index, monitoring and analysis of selected air borne pollutants: SO <sub>2</sub> , NO <sub>x</sub> , SPM, Volatile organic compounds, Pb, CO <sub>2</sub> , Persistent organic compounds, Hg, carbon and ozone. Air pollution control devices Viz ESP, scrubber technique, baghouse filters etc. Atmospheric chemistry of acid rains,

	photochemical smog, greenhouse effect, global warming, ozone hole.
February	<b>Unit –II Soil and water pollution-</b> Soil and water quality standards, monitoring and analysis of selected soil and water contaminants: COD, pesticides, heavy metals, POP's, fluoride, cyanide, nitrate, phosphate, oil & grease, Geobiochemical impact of municipal solid waste, steel plants effluent, domestic sewage. Control devices of water pollutants.
March	<b>Unit –III Food analysis</b> -Introduction to general constituents of food- Proximate Constituents and their analysis, Additives- Introduction, types, study of preservatives colors and antioxidants and methods of estimation, adulteration - Introduction, types, test for adulterants.Introduction of standards composition and analysis of following foods: Wheat, Bread, Biscuits, Jam, Jelly, Honey, Milk, Ice Cream, Butter, Cheese, Milk Powder, Oils and Fats, Tea, Coffee, Soft drinks, Alcoholic beverages, Cereal and pulses, Confectionery, Fruits, Vegetables, Egg, Fish, Meat.
April	<b>Unit –IV Cosmetics, clinical and drug analysis</b> <b>A.</b> Introduction of Cosmetics, evaluation of cosmetics materials, raw material and additives, Cosmetics colors, Perfumes in cosmetics, Cosmetics formulating, introduction, standards and methods of analysis- Creams, Face powders, Make-up, Shaving preparations, Bath preparations. Concepts and principles of analytical methods commonly used in the clinical species: i.e. ammonia, Nitrogen, Ca, Cl, CO <sub>2</sub> , Fe, K, Li, Mg, Na, P, urea, glucose. Method for analysis of proteins (i.e. albumin, bilirubin, creatinine, cholesterol, HDL-cholesterol, triglycerides) and Enzymes (i.e. Alanine Aminotransferase, acid phosphatase, alkaline phosphatase, amylase, aspartate, aminotransferase, cholinesterase, lactate, and lipase).
